

PRESSURE REDUCING VALVES

RDP 906

- All wetted parts in plastic
- Protection of low pressure process lines
- Body parts in PPH Glass fibre reinforced
- PTFE coated diaphragm
- Adjustable from 1 to 9 bar
- From ND 10 to ND 25

APPLICATION AND FITTING

A pressure reducing valve RDP 906 maintains constant the pressure downstream, at the adjusted value (*lower than the upstream pressure*).

An EPDM diaphragm, PTFE coated, separates the mechanical parts body and the channel. All wetted parts are in plastics. The seat seal is in EPDM or FPM according to the model and connections. Without any metallic parts exposed to the atmosphere it allows a location in aggressive, corroding ambient.

The downstream pressure is adjustable from 1 to 9 bar with an upstream pressure up to 10 bar.

These equipment protection devices may be fitted in any position, in line, or on by-pass according to the application.
