BAMOPHOX 194
Amperometric sensors signal monitor

INSTRUCTIONS MANUAL

Amperometric signal monitor
BAMOPHOX 194

(Technical information and Manual for LOGGER /RS422 version are on a specific document)

Table of contents

# 1. TECHNICAL FEATURES

Displayed parameters:	Measured values - Configuration Menu - Temperature
Display:	Back lighted - 2 lines of 16 alphanumerical characters ; 9 mm high
Indication:	LED alarms status
Configuration:	8 push buttons keyboard on front board - Keyword protected
Sensor input:	For amperometric sensors 4-20 mA *(2 wire technique)* or 0/-2 V *(4 wire technique)*
Scales:	Configuration within the sensor in use, from 0.001 to 9999 ppm or g/L
Accuracy:	depending of the sensor in use *(see technical features of sensor)*
Flow control	Input for inductive sensor type PNP or NPN
Temperature:	±3,0 °C
Relay outputs:	4 contacts (Silver alloy), voltage free
Thresholds:	3 programmable independent thresholds - with adjustable hysteresis 0…100 %
	and adjustable, timer from 0 to 9999 sec
Output relay (S4)	Common alarm signal for: Too long injection, Temperature out of range etc.
Contact:	Initial resistance 0.1 Ohm as a maximum (voltage drop 6 V DC 1 A)
	Rated at 831 V AC / 3 A / 277 V AC ; 90 W / 3 A / 30 V DC
	Switching capacity *(minimum)* 100 mA, 5 V DC
	(depending of switching frequency, ambient conditions, accuracy)
	Mechanical life time *(minimum)* 5 x10^6 operations *(180 commutation /min)*
	Electrical life time *(minimum)* 2 x10^5 *(20 comm./min)* [3 A, 125 V AC], [3 A, 30 V DC]
	and 10^5 (evaluated charge) for 3 A, 125 V AC
ON/OFF Regulation:	Pulse time 0…9999 sec - High and low proportional bandwidth, high and low dead zone.
Calibration sequence:	Regulation on standby, relay outputs inhibited, analogical outputs stand on last values
Measurement output:	0/4-20 mA (maxi 600 Ohm) proportional to measurement, galvanic insulated
Temperature output:	0/4-20 mA (max 600 Ohm), scaling -20 to +160°C, galvanic insulated
Program Testing:	simulation through the menu on measurement, temperature, and relay outputs
Main power supply:	230 V AC / 50-60 Hz (other on request) - Consumption 10 VA
Models:	Panel mounting, IP65, 72 x 144 mm, connections on screw terminal IP40
	Idem DIN Rail mounting, only for blind monitor
	Wall mounting, IP65, cable glands, connections on screw terminal

OPTION (RS 422 + Logger)

Communication:	RS422 output, J-BUS link, binary slave mode, 2400 to 9600 bauds
Data Logger:	Cycle average measurement record, with a programmable period,
	150 000 records on MMC (multi media card) / External driver necessary for reading

4. FRONT PANEL

S1, S2, S3, and S4
indicate relays status:

LED lighting = contact ON
LED OFF = contact OFF
LED flashing = Timer in use

2 lines /16 alphanumeric characters
9.22 mm high - Back lighted

Key **"A"**
To display the parameters of upper line.
(main BAMOPHOX)

Key **"B"**
To display the parameters of lower line.
(Extension blind BAMOPHOX)

"VALID" key
To save the parameters on EPROM
when it asks:

SAVING ?

Caution, when you press this key,
all parameters are saved.
(previous data programmation
will be overwrited).
If you are not sure of any modification,
do not press the VALID key,

To change parameters of data capture:

Numéric input increase the
flashing digit (loop 0 after 9).

Reverse the choice Yes / No,
Up/Down, 0-20 mA / 4-20 mA etc.

To go to the next display or to change a value.

"ENTER" key
To change the step displayed menu.
At the last step, it comes back to the
first line.

"MENU - " key
To move the cursor during configuration.
At the last digit, comes back on the first one.

"MENU +" key
To go to the next menu.

Pushing simultaneously both keys
"MENU +" and **"ENTER"**
allows a fast return to measurement display.

VALID

Measurement

Highest limit BW

High BANDWIDTH (HIGH PB)

High dead zone

Set point

Low dead zone

Low BANDWIDTH (LOW PB)

Lowest limit BW

Time

Example

<u>With process configuration:</u>

- Set point: 1.5 ppm
- High dead zone: 0.4 ppm between 1.5 and 1.9 ppm
- Low dead zone :   0.1 ppm between 1.4 and 1.5 ppm
- High BANDWIDTH: 3.5 ppm (that is a limit of 5 ppm for the maximum)
- Low BANDWIDTH: 0.5 ppm (that is a limit of 1 ppm for the minimum)

- Over the highest limit (>5 ppm), S2 is "ON" for a continuous injection (contact S2 is closed)
- Under the lowest limit (<1 ppm), S1 is "ON" for a continuous injection (contact S1 is closed)
- Inside the dead zone (between 1.4 & 1.9 ppm), S1 and S2 are "OFF", no injection at all (contacts S1 and S2 are opened)
- If the measurement value is between the dead zone and the highest limit (between 1.9 & 5 ppm)
 or between the dead zone and the lowest limit (between 1.0 & 1.4 ppm), the contact S1 or S2 are "ON" only for a time
 proportional to the step between measurement and desired value.

$$\text{Closing contact time /S1} = \frac{\text{Cycle time x (measure - set point)}}{\text{Low proportional BANDWIDTH}}$$

CAUTION: The minimum closing time of a relay is 1 second.

If the measurement M=1.42 and if the cycle time is 10 seconds,

the closing contact time is: $\dfrac{10 \times (1.5-1.42)}{0,4} = 2$ sec

This operating mode allows a PID regulation through an analog output 0/20 or 4/20 mA

REGUL **ON/OFF** ▲ To switch ON or OFF the regulation mode

ENTER

REGUL **AUTO/MANU** ▲ MANU=MANUAL to be able to check the relays output

ENTER

SET VAL **00.00 ppm** ▲ ▶ Set point value

ENTER

GAIN : **00.000** ▲ ▶ Gain setup (see also ADJUST PID PARAMETERS)

ENTER

Td : **0012** Sec ▲ ▶ Derivative timing

ENTER

ACTION: **DIRECT/REVERSE** ▲ Direct action or Reverse action for PID regulation

ENTER

OUTPUT **4/20 mA** / **0/20 mA** ▲ Signal output

VALID

SAVING ?

To switch the PID regulation on stand-by, input 24 V= 20 mA on terminals 5(+) and 6(-).

ADJUST PID PARAMETERS
In order to determinate the setup values for PID regulation, we recommend to use the Ziegler-Nichols open loop method
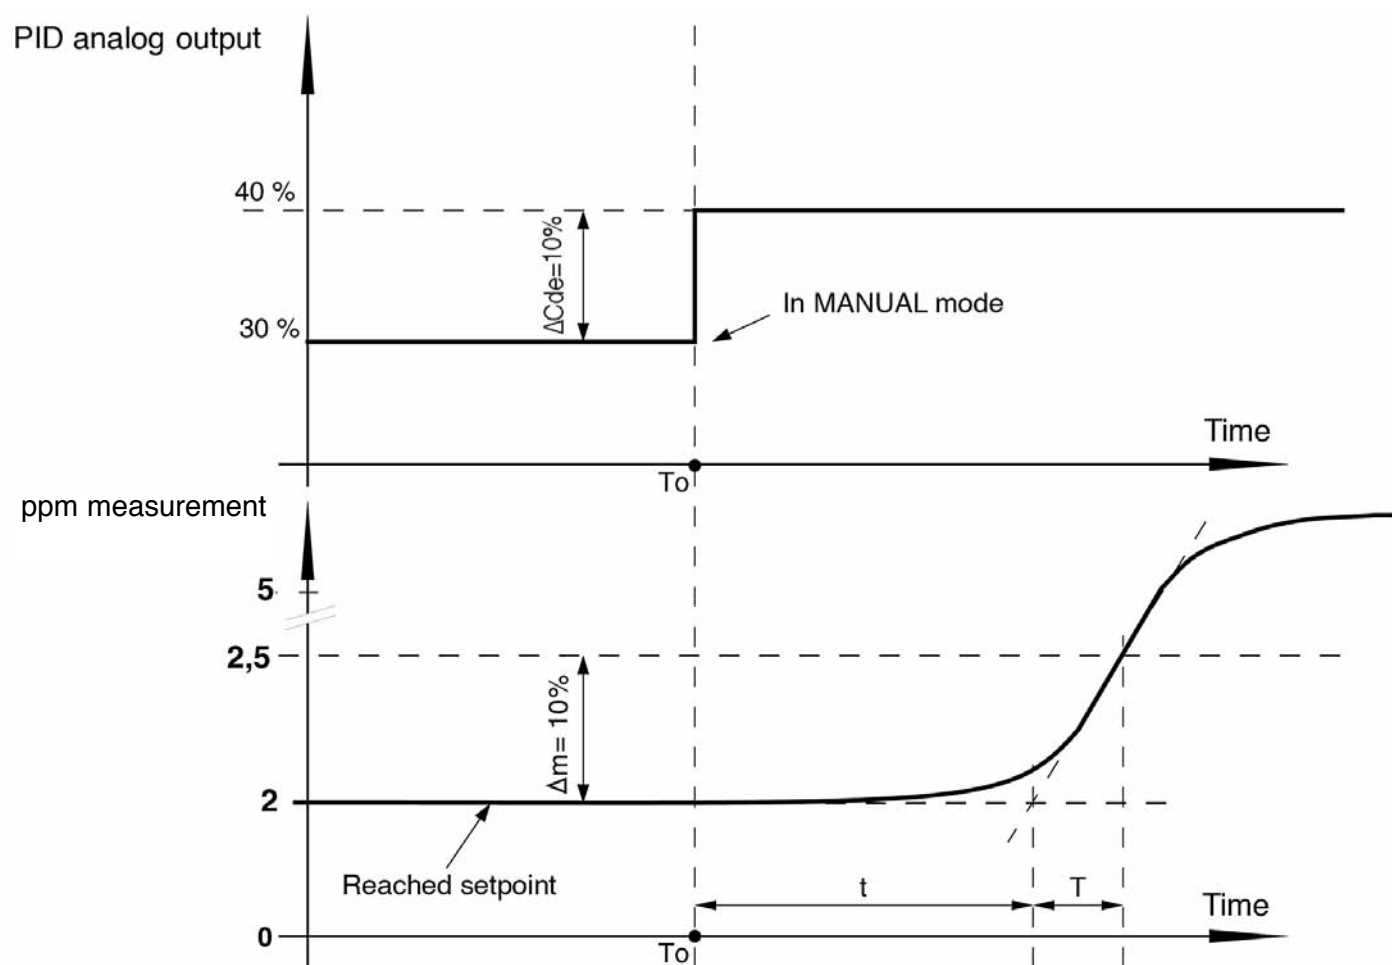

Proceed as following:

- Connect a recorder to the analogic measurement output or write the reading measurement values for then to draw the graph $f_{(time)}$
- Switch on the PID regulation in MANUAL mode
- Reach to and keep close the measurement value to the set point, adjusting the PID output
- Apply on ΔCde a step of 10 % (for instance) on the analog output (Cde).

Example: if the value is 30%, apply 40%

- Note on the graph the corresponding timing T_0
- Find on the graph both times t ant T such as Δm= ΔCde:
    t = delay of response
    T = Time corresponding to the same variation in % of measurement (Δm) and the analog output (ΔCde), Δm= ΔCde. This value may be found out on the slope.

- Modify the PID parameters as following:

Regulation	Gain	Ti(s)	Td(s)
PID	1.2 x T/t	2 x t	0.55 x t
PI	0.9 x T/t	3.3 x t	0
P	T/t	9999	0

ENTER

FLUIDE T. + **0000** °C ▲ ▶ *(In MANUAL Mode only)*

ENTER

SAVING ?

VALID

ELECTRODE CALIBRATION

CAUTION - Temperature compensation:
set up the instrument on MANUAL mode at 20°C

During calibration in mode "MODIFICATION", measurement value is on stand-by on the last reading value, the regulation is on stand-by. A delay after ending the calibration allows a restart of the complete system before to automatically restart the regulation mode.

ENTER

STANDARD. ZERO **YES/NO** ▲ ▶

Choose **NO**, the sensor is a non adjusting zero required
NO will send to the display "**SLOPE**"

ENTER

STANDARD. SLOPE **YES/NO** ▲ ▶

Choose **YES** to proceed to a sensor calibration
NO will send to the display "**DELAY**"

ENTER

Proceed to a test to know the standard value according to the sensor in use.

STANDARD **00.00** ppm ▲ ▶

Enter the result value

(For good calibration, value has to be as closed as the sensor full range)

ENTER

SLOPE   xxx,x %

Sensor gain is displayed.

ENTER

CAUTION:

If the slope value is >200% or <50%, do not valid this calibration step. Check the dirtiness of the sensor; do a maintenance on it and proceed to a second calibration.

If the slope value is between 50 and 200%, proceed to a second test to confirm the previous test

DELAY 0015 Sec

Set up the time during the measuring and status regulation previous to the calibration, will be displayed after saving the calibration.

SAVING ?

VALID

CAUTION - Temperature compensation: if a PT100 probe is connected, reset the temperature compensation in "AUTO"
